

*** CASE 1 ***

When "you want to include a JavaScript Library"

When "you will be using that JS Library later After Loading your Page"

- In such case you CAN include your JavaScript File in the Footer.

NOTE: As JS Library that we use After Loading the Page (depending on Request received from Site Visitor) we can load it later after the entire page's Design Loads. This will help you to load your Website faster on your Browser.

*** CASE 2 ***

When "you want to include a JavaScript Library"

When "your JS Library files will be useful to run your Page while it is Loading"

- In such case you WILL include your JavaScript File in the Head.

NOTE: As the JS Libraries that are mandatory for Loading a Page, you should Load such JS Libraries on the Top of your Page, because otherwise your Page's design/action may not work.
